

Download and Install Python 3

To write and run Python Program, first we need to install Python on our computer

Steps to Download Python on Windows

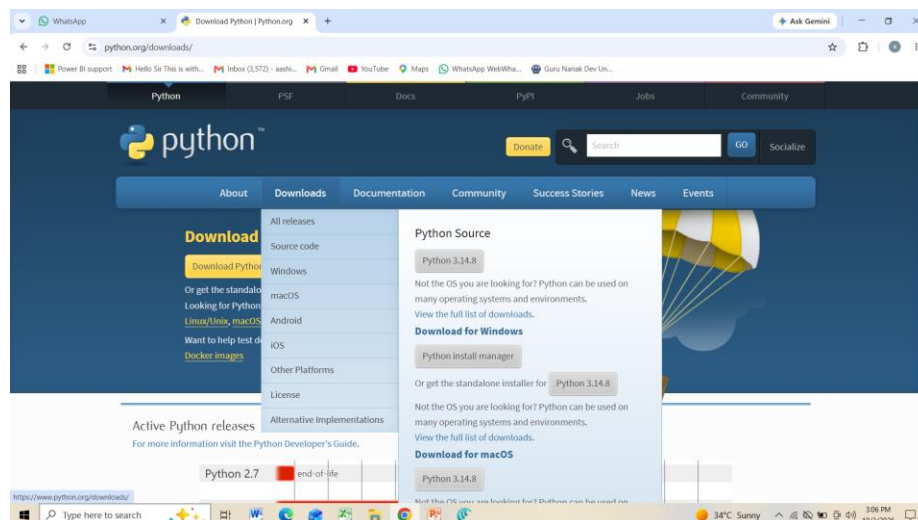

Step 1: Open the Official Python Website

- Open a web browser such as **Google Chrome, Microsoft Edge, or Mozilla Firefox**. Open the official Python website: <https://www.python.org/>

Step 2: Open the Python Downloads Page

- On the Python website, click on the **Downloads** option.
- If you are using a Windows computer, you can directly visit the **Python Releases for Windows** page: <https://www.python.org/downloads/windows/>. This page provides the available Python releases and installation options for Windows.

Step 3: Download the Windows installer

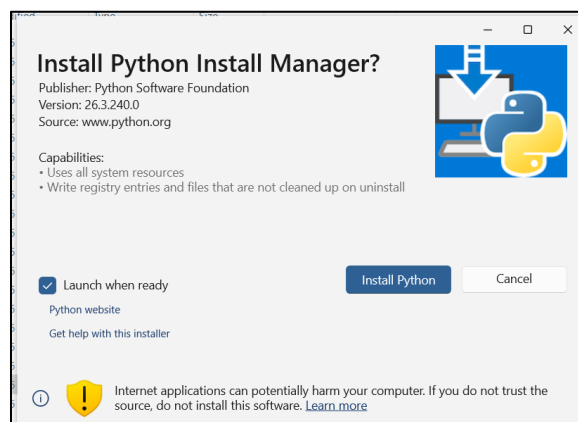

- On the Python 3.14.8 page, scroll down to **Files**. For a normal Windows 10/11 64-bit computer, download:

Windows installer (64-bit)
`python-3.14.8-amd64.exe`

Step 4: Install Python

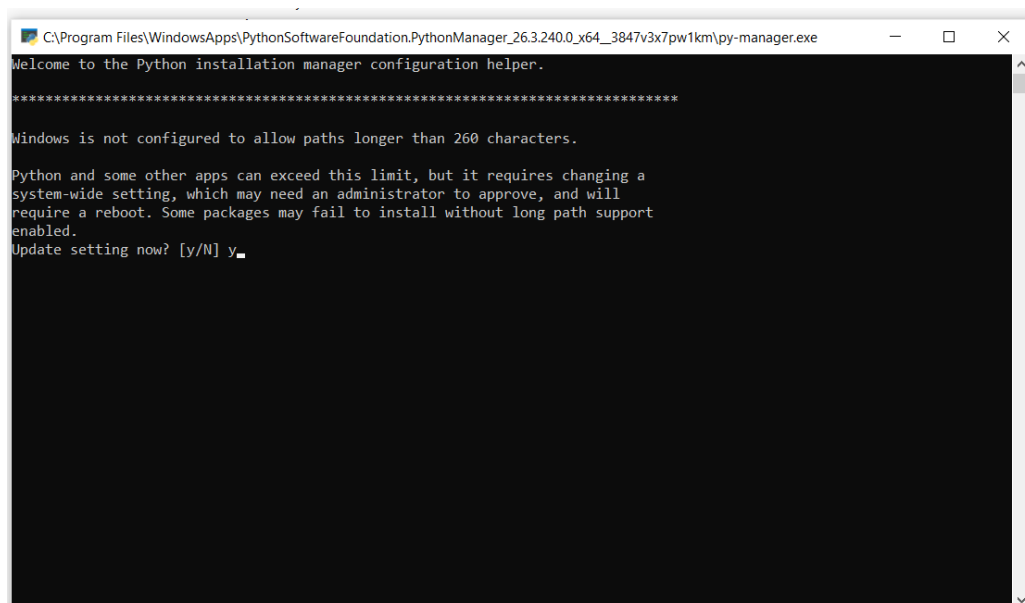

After downloading:

- Double-click `python-3.14.8-amd64.exe`.

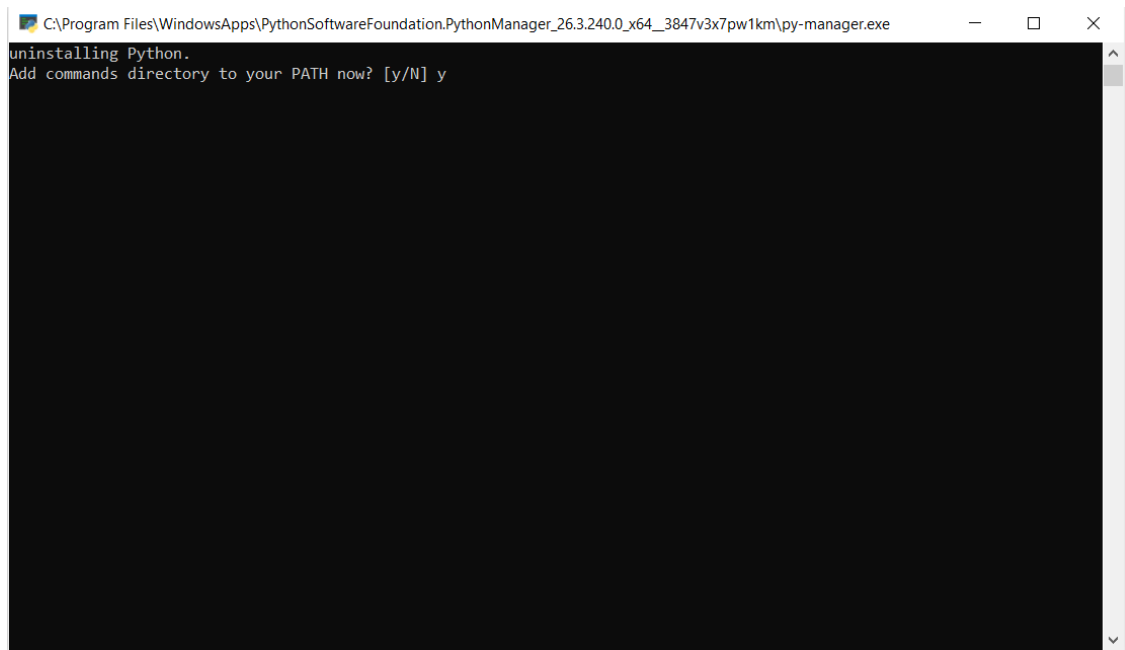

- Click Install Python.

- Update setting now? [y/N]

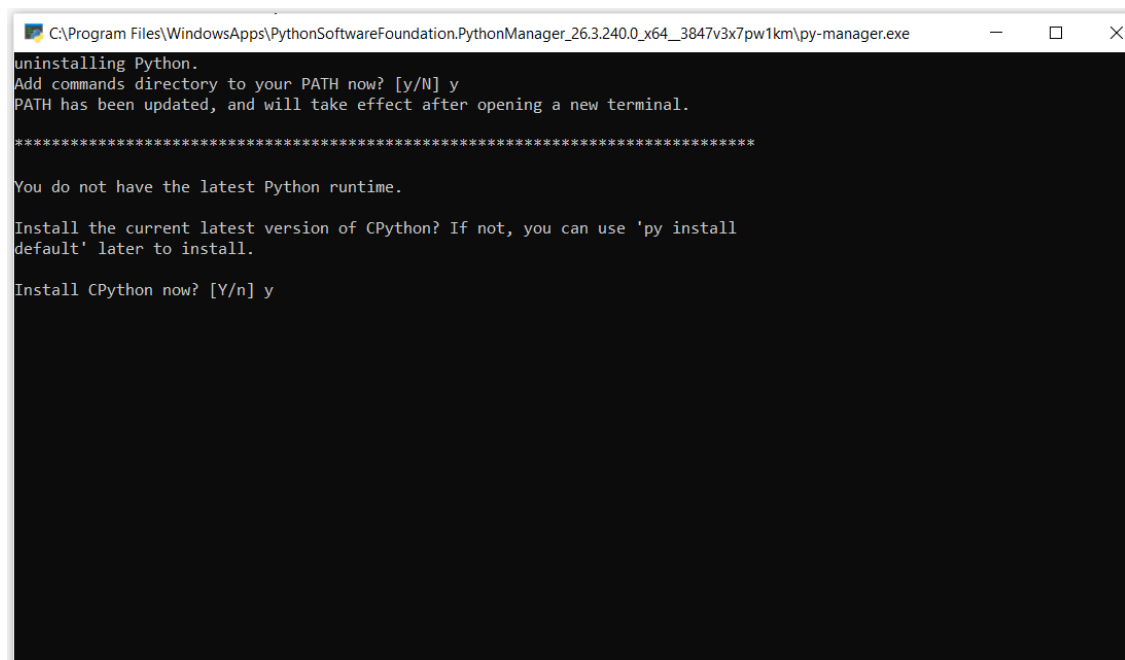

- After typing y and press **Enter**.
 - This will enable **long-path support in Windows**. Some Python packages may not install correctly if this setting is disabled.
3. Add commands directory to your PATH [Y/N]: Y

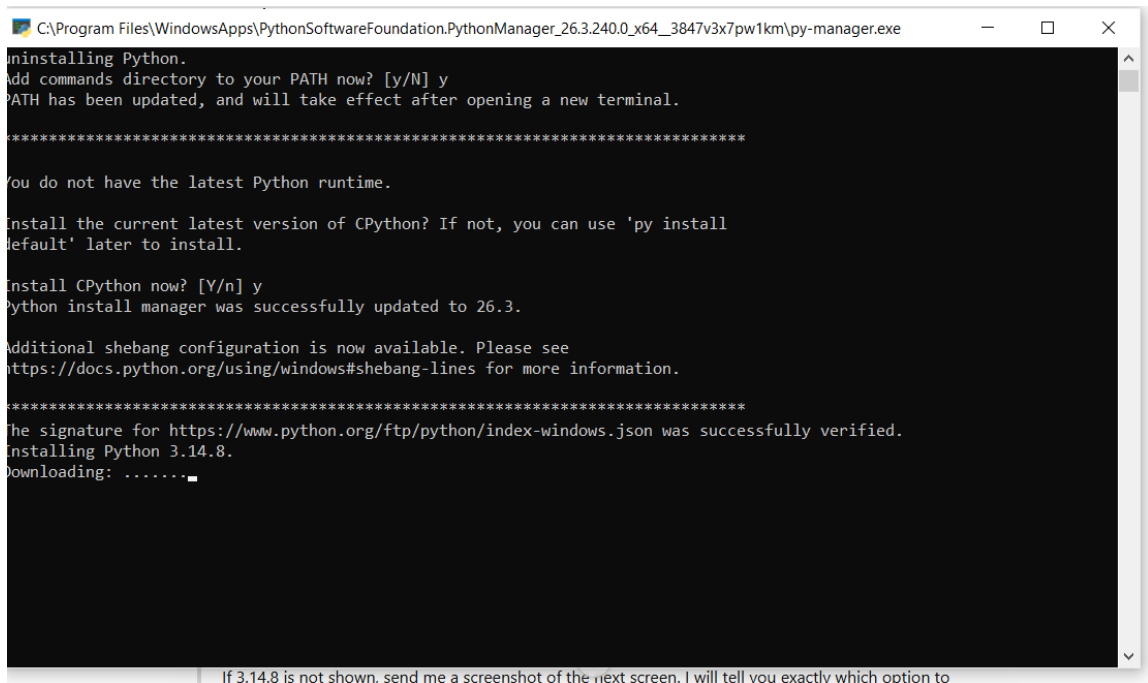

This adds Python's **commands directory to the Windows PATH**. It allows you to run Python-related commands directly from **Command Prompt (CMD)** or **PowerShell** without specifying the complete folder path.

4. Install Python now? [Y/N]: Y

OR

```
C:\Program Files\WindowsApps\PythonSoftwareFoundation.PythonManager_26.3.240.0_x64__3847v3x7pw1km\py-manager.exe
uninstalling Python.
Add commands directory to your PATH now? [y/N] y
PATH has been updated, and will take effect after opening a new terminal.

*****

You do not have the latest Python runtime.

Install the current latest version of CPython? If not, you can use 'py install
default' later to install.

Install CPython now? [Y/n] y
Python install manager was successfully updated to 26.3.

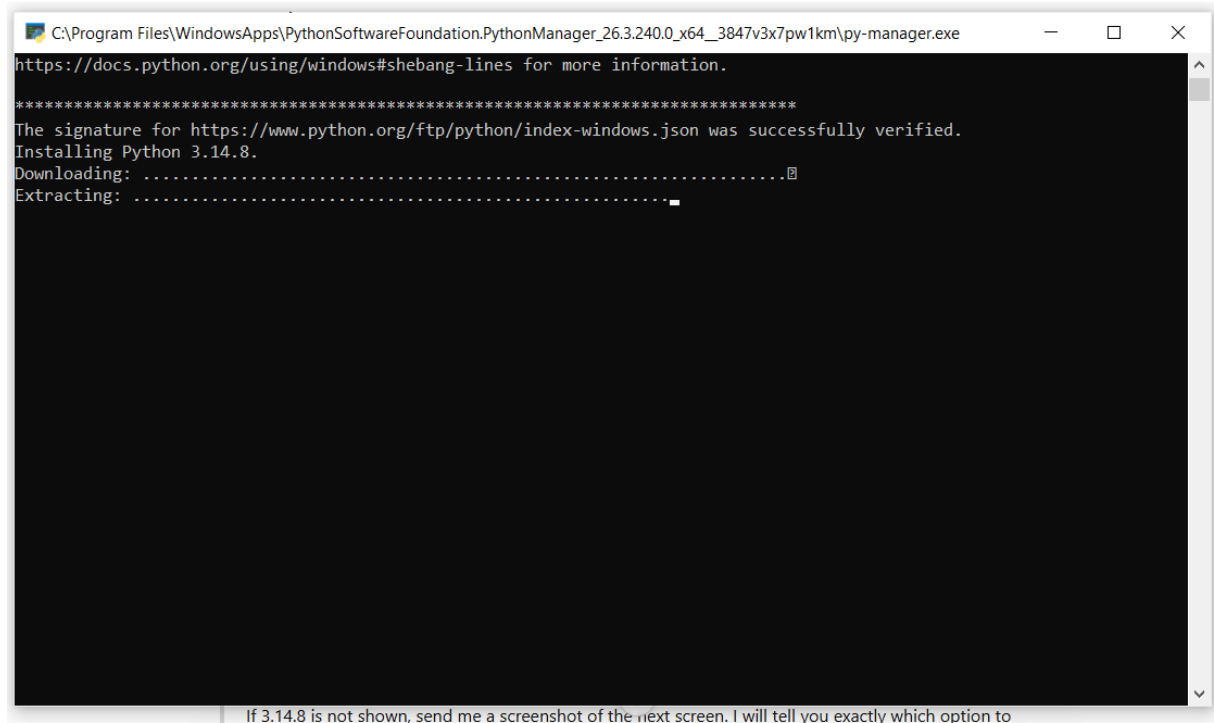

Additional shebang configuration is now available. Please see
https://docs.python.org/using/windows#shebang-lines for more information.

*****

The signature for https://www.python.org/ftp/python/index-windows.json was successfully verified.
Installing Python 3.14.8.
Downloading: .....
If 3.14.8 is not shown, send me a screenshot of the next screen. I will tell you exactly which option to
```

- This will update Python Install manager and display Python Install manager was successfully updated to 26.3

OR

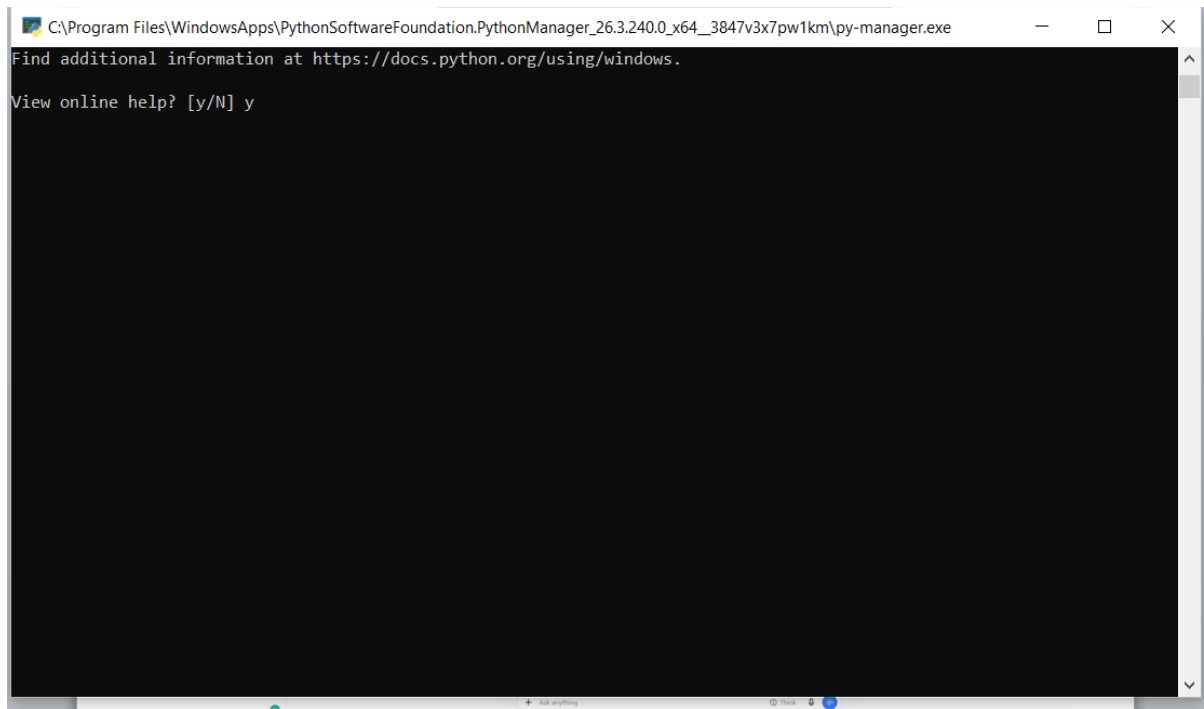

```
C:\Program Files\WindowsApps\PythonSoftwareFoundation.PythonManager_26.3.240.0_x64__3847v3x7pw1km\py-manager.exe
https://docs.python.org/using/windows#shebang-lines for more information.

How to Check Python Version in Windows?

To verify the version of Python installed on your computer, follow these steps for Windows:

- Open the Command Prompt (type “cmd” in the Start menu).
- Type `python --version` or `python3 --version` and hit Enter.
- The version of Python will appear on the screen.

If that does not work for you, it means Python is not installed. You can get it from python.org.
